

CASE STUDY Tanglewood

Client: Christopher Sims Custom Homes

Project: 676 sq.ft. garage

Coating: Xpedite Premium

Color: Wheat

We are convinced that garages can be spectacular places where people can work and have fun. This three-car garage is an example of a match between function and form.

The floor was primed and coated with a wheat color Uropoxy and broadcasted with Saddle Tan flakes and left to cure overnight. Next day we applied a polyaspartic topcoat to make the floor stain resistant even against hot-tire pick up.

The garage was not an afterthought. It is an important part of the beautiful setting surrounded by manicured lawns. Even the windows fit perfectly into the overall architectural plan.
